December 9, 1958

Although there may be some commercially available device that can be adapted, it is expected that the development of a satisfactory experimental device would require considerable original thought and experimentation.

Informal monthly letter reports would be submitted describing the progress of the activity on the proposed program. These would be supplemented by discussions during periodic visits by your technical representative. At the end of the proposed research period, a summary report would be submitted describing the activity performed under the proposed program.

It is proposed that the contract provide for a six-month period of research, with an estimated appropriation of \$10,589, including the fixed fee. A general breakdown of the estimated costs is attached.

The proposed contract would be a period-basis research agreement, consistent with our current contractual arrangements and providing only for a fixed period of research leading toward the objective outlined above.
